

Experiment 8 : To study Angular JS

Name of Student	Anushka Nilesh Shahane
Class Roll No	D15A 54
D.O.P.	4/4/25
D.O.S.	11/4/25
Sign and Grade	

Aim: To study AngularJS

Description :

- a) Demonstrate with an AngularJS code one way data binding and two way data binding in AngularJS
- b) Implement a basic authentication system for a web application using AngularJS. Create a simple login page that takes a username and password, and upon submission, checks for a hardcoded set of credentials. If the credentials are valid, display a success message; otherwise, show an error message. Demonstrate AngularJS controller, module and form directives.
- c) Users want to search for books by title, author, or genre. To accomplish this, develop an AngularJS custom filter named bookFilter and include it into the application.
- d) Create a reusable and modular custom AngularJS service to handle user authentication. Include this service into an application.

Output:

One-Way & Two-Way Data Binding Demo

Welcome to Book Finder

Data Binding Demo

One-Way Binding: Anushka Shahane D15A 54

Two-Way Binding:

Heyy..Anushka

You typed: Heyy..Anushka

Conclusion: This experiment helped in understanding the core features of AngularJS, including one-way and two-way data binding, form validation, custom filters, and services. It demonstrated how AngularJS simplifies the development of dynamic and interactive web applications with efficient structure and reusable components.
